MARITIME WORK & REST HOURS CONTROL SOFTWARE

This customised software caters to the complex regulations in:

- International Labour Organisation Convention 180 – Article 5
- Maritime Labour Convention 2006 – Regulation 2.3 including multi-language support.
- International Maritime Organisation Convention on Standards of Training, Certification and Watch-keeping for Seafarers, 1978, as amended in 2010 (Manila Amendments) – Chapter VIII, section A-VIII/1. Including exception clauses and multi-language support.
- United States Oil Pollution Act 1990, Code of Federal Regulations - Title 33 Part 156 section 210(d) and 46 USC 8104.
- OCIMF Recommendations Relating to the Application of Requirements Governing Seafarers' Hours of Work and Rest where clauses in above international regulations are applied throughout the period the crew is at work

With so many regulations in force (either running concurrently or partially excluded, dependent on the trading region), it is virtually impossible to manually calculate or even anticipate the violations that may ensue from a given pattern of work or rest over any given period. It is therefore, imperative that the users and evaluators have a friendly tool to enter the data and instantly see the warnings or violations. The tool indicates the hour at which the violation occurs and the clauses affected.
